

ABSTRACT OF THE DISCLOSURE

A screen for a rear projection type projector[[],
comprises[]]^{includes} a main screen formed by bonding a plurality of
lenticular lens sheets into one with the edges thereof as a
junction plane, and a transmissive diffusion screen for rear
use[[] comprising[]]^{including} an image forming layer and a transparent
layer arranged behind the main screen on an optical path of
light fluxes projected from a projector, wherein the
junction plane is located at a position near the center of a
main surface of the main screen.
